User Manual

For Couplers (Clamps)

EN: This product is a safety-relevant part. You need special knowledge to use and maintain it. Please make sure that this part is locally accepted by regulations and laws, that it is in best conditions and suitable for the load you're going to hang on. A liability for damages or follow-up-damages in case of a misuse or in case of no maintenance is generally excluded.

Usage: For hanging fixtures with suitable mechanism on truss systems. Tighten the butterfly nuts by hand. Do not use tools to tighten as this could damage the nuts. Do not put protection material between the clamp and the truss. There must be a proper contact between the clamp and the truss.

Security Notice

- Do not overload (see coupler stamp)
- Only use on right-sized truss
- Make sure the area under the truss is blocked: risk of injury
- Do not modify the coupler
- Every fixture must be additionally secured (safety cable)
- Please work accordingly the local regulations (f.e. BGV-C1 in Germany, DIN 15560)
- Check and maintain the couplers in periods
- In case of corrosion, cracks, deformation or after effect of heat or coldness do not use this unit any more!
- Operation temperature: -30°C to +60°C (-4°F to 140°F)
